

Supercharge your Hazard Vulnerability Analysis

The objective of your HVA is to provide a solid foundation for your emergency and continuity of operations planning. The current HVA may be adequate to meet your accreditation needs, but you need more data to assess the risks, develop mitigation strategies and prepare your organization for the unthinkable.

Virtual Corporation's new HV Advantage™ is designed to supercharge your annual HVA and to provide you with the depth of useable, actionable information you need.

Our Healthcare Consultants work with your core team to:

- *Identify and review relevant risk and current state information*
- *Conduct highly refined interviews*
- *Evaluate and analyze collected information*
- *Utilize the HVAdvantage™ model to develop:*
 - *Enhanced HVA*
 - *Preparedness scorecard*
 - *Service Disruption Impact*
 - *Facility Dependency matrix*
 - *Risk Matrix*
 - *Site vs Target Risk Assessment Scorecard*
- *Create detailed, actionable information for facility staff*
- *Communicate key results senior leadership*

In addition to the above, a comprehensive risk assessment covering 8 risk domains is completed. This risk assessment provides data on areas beyond that covered by the standard HVA.

Our clients receive an objective and comprehensive report based on the findings derived from HVAdvantage™.

The entire HVAdvantage™ process can be accomplished in as little as 10 to 13, weeks depending upon the size, complexity and number of facilities being evaluated.

HVAdvantage™ is flexible. Virtual tailors the process to meet your specific requirements.

To request a copy of our White Paper, “How Confident Are You About The Quality and Extent Of Information In Your HVA?” or learn more about Virtual’s new HVAdvantage™, contact us at 973-426-1444 or inquire at info@virtual-corp.net
