BSI Accepts Virtual Corporation's Services and Business Continuity Maturity Model[®] into Associate Consultancy Program

Budd Lake, NJ – September 11, 2008 – Virtual Corporation announced today that the company is now recognized as a participant in the BSI Americas Associate Consultant Program (“ACP”). BSI America Inc. oversees the ACP program to acknowledge consulting companies that BSI believes are credible and offer services that meet expected levels of knowledge, value and performance.

Virtual project engineered and published the Business Continuity Maturity Model[®] (BCMM[®]). The BCMM[®] is a benchmarking and assessment tool for businesses of all sizes to assist in improving their ability to recover from a disruption. The BS25999 is a standard for BC certification. In addition to preparing an organization for BS25999 certification, the BCMM[®] quantifies the current state of an organization's BC program, provides a gap analysis, and assists in formulating immediate and long term program recommendations.

“BSI is committed to aligning itself with best-in-class companies to provide leading-edge services”, said Todd VanderVen, President of BSI America. “Virtual Corporation is a pioneer and recognized BC global leader. Virtual's BCMM[®] will facilitate clients in continuous improvement and add value to the certification process; we encourage the use of Virtual's BCMM[®].”

Margaret Langsett, Executive Vice President, stated “By leveraging the core expertise of two market leaders, we are providing a powerful combination of business continuity services.” She said, “working together, BSI and Virtual help organizations maintain continuous, sustainable operations while ensuring compliance with an established global BC standard.”

“The combination of Virtual Corporation and BSI joins two of the most well respected global leaders in the business continuity industry,” said Scott W. Ream, President of Virtual Corporation. “This relationship validates our commitment to provide exceptional service and innovative solutions for both our current and potential clients.”

Published in 2003 as the first globally used BC program benchmarking tool, the BCMM[®] provides a consistent, objective means for evaluating disaster readiness including criteria in 8 Corporate Competencies and 4 BC disciplines: business recovery, incident management, technology recovery and security management. In recognition of the BS 25999 as industry best practice, Virtual Corporation formed an international team of BCMM[®] assessors to ensure the alignment of these 2 valuable tools. Used as a pre-certification evaluation, the BCMM[®] provides a mechanism to evaluate the BC program and provides a preview of how well the organization meets the BS25999 criteria.

Virtual offers the BCMM[®] open access tool, available for no charge in both English and Spanish on their website. A self-assessment survey is also provided in their business continuity planning software, Sustainable Planner[™]. To learn more about the BCMM[®], Virtual’s consulting services and their web-based BC/DR software Sustainable Planner[™] visit www.virtual-corp.net.

About Virtual Corporation

In business for more than 14 years, Virtual has helped numerous enterprises ensure that they can recover from business disruptions by designing and implementing sustainable business continuity programs. Virtual Corporation’s software solution, Sustainable Planner[™], empowers business continuity managers to implement an innovative and sustainable process to build, update and maintain their own business continuity plans allowing business continuity professionals time to analyze exposures, enhance preparedness, and consult with business. Services include: Enterprise Business Continuity Program Design and Implementation, Business Continuity Maturity Model[®] assessments and training, and BC/DR Exercise Design and Facilitation.
